Browser OCR Test

Indra ONNX models running locally with ONNX Runtime Web

---

1. Private by design

The image stays on this device.
Detection and recognition happen
inside this local browser tab.

2. Portable execution

WebAssembly provides a reliable
baseline across modern browsers.
WebGPU can accelerate supported
operators when a GPU is available.

3. Structured output

Each recognized line includes a
bounding box and confidence score.
A layout model predicts reading order.

4. Language support

Latin, Cyrillic, Greek, Devanagari,
Bengali and Chinese print are covered.
Handwriting is not supported yet.

Expected result

The headings and paragraphs should be detected as separate lines,
then returned in a sensible two-column reading order.
